- katarzynamarcinkevicz@gmail.com
- Warsaw, Poland

EU work authorization (Poland): Karta pobytu – no sponsorship required

Technical Skills

- Languages:** Python
- Frameworks & concepts:** Django, Django REST Framework (DRF), aiogram, Object-Oriented Programming (OOP), REST API design
- Databases:** SQL, PostgreSQL
- Testing:** pytest, pytest-django, Unit Testing, Test-Driven mindset
- Tools & Practices:** Git, GitHub, Docker, CI/CD (GitHub Actions basics), Swagger / ReDoc (drf-spectacular), Figma, Photoshop

Languages

Russian: Native | English: B2 | Polish: B2

Education

- Python Developer PRO | SkillFactory (in progress)
- M.Sc. candidate, Psychology & Sexual Psychotherapy | University Vizja, Warsaw

Profile

Junior Python Developer who shipped a live, tested, documented Django REST API – 77 commits, 81% pytest coverage, deployed on Railway. Background in psychology and independent client work (40+ insurance cases handled end-to-end) means I read requirements the way I used to read people: carefully, and without assuming I already know the answer. That combination shows up in the code: structured, documented, and built for the next person who has to read it.

Featured project

- Habit & Mood Tracker**
- Django REST API · Django 6.0, DRF, PostgreSQL, pytest, Railway*
77 commits · 81% test coverage · auto-generated Swagger/ReDoc docs
· live in production
- Designed the full data model for habits, streaks, and daily mood logs, including soft delete so user history is never destroyed by a mistake.
 - Built a complete CRUD REST API (DRF ViewSets) with filtering, search, and ordering; documented every endpoint with drf-spectacular so a frontend or mobile team could integrate without asking me a single question.
 - Covered core logic – streak calculation, soft delete, mood constraints – with automated pytest tests, reaching 81% test coverage (90% on the API layer), verified with pytest-cov.
 - Deployed to Railway with PostgreSQL and WhiteNoise.
 - Redesigned the Habit model mid-project once the first schema stopped fitting reality, and resolved the migration conflicts that followed – the kind of debugging a tutorial doesn't prepare you for, but production code demands.

Other projects

- Moscow Zoo Telegram Bot**
- FSM-driven 8-question quiz bot (aiogram 3.x) with personalized results and async request handling.
- [Moscow Zoo Bot GitHub Repository](#)
- Currency Converter & Battleship Game**
- OOP-based Telegram bot and game, built to practice clean object-oriented architecture.
- [GitHub repository Currency Change Bot](#)
[GitHub repository Sea battle game](#)

Work Experience

- Psychological Group Facilitator (Internship) | Mental Health Support & Rehabilitation Center | Mar 2025 – May 2025**
- Facilitated group sessions and independently handled crisis situations — the same composure under pressure I now bring to debugging a failing deploy.
- Independent Insurance Consultant (per-order) | Feb 2025 – present**
- Managed end-to-end client communication and documentation across 40+ completed insurance policies, with zero handholding and a strong record of accuracy under deadline pressure. Working independently with minimal supervision
- Sales Assistant | Children's Clothing Store | Jan 2024 – Aug 2025**
- Customer service, cash desk operations and inventory tracking; consistently accurate cash handling under pressure.
